RESPONSIBILITY FOR FINANCIAL STATEMENTS

These Financial Statements have been prepared in accordance with the International Public Sector Accounting Standards (IPSAS) as issued by the International Public Sector Accounting Standards Board (IPSASB), provisions of the Finance (Control and Management) 2014 as revised and the Financial Reporting Council of Nigeria (FRCN).

As the Accountant-General, I have the responsibility over general supervision of accounts and the preparation of financial statements that is compliant with accounting standards.

In fulfilling this responsibility, I ensure that proper accounting records are maintained; applicable International Public Sector Accounting Standards are applied; judgements and estimates made are reasonable and prudent; and internal control procedures are instituted to provide reasonable assurances that financial transactions are validly recorded and resources are safeguarded.

These Financial Statements reflect the true and fair view of the financial position of the Government and its operations for the year ended 31st December, 2022 which complies with IPSAS 33 (First Time Adoption of Accrual Basis IPSAS) and the guidelines issued by the FAAC Technical Sub Committee on IPSAS implementation.

Therefore, I accept responsibility for the integrity and objectivity of the Financial Statements and the information contained therein.

Compoul;

Tunde Aregbesola (Accountant-General/Permanent Secretary) Ogun State. 28 April, 2023

P.M.B. 2068, Abeokuta, Ogun State www.ogunstate.gov.ng

OFFICE OF THE AUDITOR-GENERAL (STATE)

Block A, New Secretariat Complex, Oke-Mosan, Abeokuta, Ogun State.

AUDIT CERTIFICATE

The Financial Statements and Accounts of the Government of Ogun State, Nigeria for the year ended 31st December, 2022 have been audited in accordance with section 125 (2) of the Constitution of the Federal Republic of Nigeria 1999 (as amended), part 7 paragraphs 35-37 of the Public Administration Law of Ogun State of Nigeria, 2006, the provision of IPSAS 33 (First Time Adoption of Accrual Basis IPSAS) as well as Ogun State Audit Law of No 80 of 2022.

The audit was conducted in accordance with International Standards on Auditing and INTOSAI Auditing Standards.

In the course of the audit, I evaluated the overall adequacy of the information presented in the General-Purpose Financial Statements which were prepared in accordance with International Public Sector Accounting Standards (IPSAS) Accrual Basis as described in Note 2.1.

I have obtained information and explanation that, to the best of my knowledge, was relevant and necessary for the purposes of the audit. This audit has provided me with reasonable evidences and assurances which formed the basis for my independent opinion.

In my opinion, the Financial Statements which are in agreement with the books of accounts and records show a true and fair view of the Financial Position of the Government of Ogun State for the year ended December 31, 2022 and the transactions for the fiscal year ended on that date.

Balogun A.L.

Auditor - General Ogun State

In compliance with WB-SFTAS requirements, Ogun State prepared a five(5) year financial summary of its activities.

However, due to the adoption of a different accounting basis (IPSAS Accrual) in year 2019, the five year financial summary will be split between IPSAS CASH (2018) and IPSAS Accrual (2019-2022).

Emgenl;

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

OFFICE OF THE ACCOUNTANT-GENERAL STATE TREASURY OFFICE THE PERMANENT SECRETARY / ACCOUNTANT-GENERAL OGUN STATE, NIGERIA

NOTES TO THE FINANCIAL STATEMENTS

1. General information

The State financial statements for the year ended 31 December 2022 were authorized for issue by the Accountant General. Ogun State Government's (OGSG's) principal activities are the provision of social, infrastructure, educational, housing, justice, transport, agricultural and health services, waste management and emergency services.

2.1 Statement of compliance with IPSAS and transitional explanations

The financial statements have been prepared in accordance with accrual basis International Public Sector Accounting Standards (IPSASs). IPSAS 33 (First Time Adoption of Accrual Basis IPSAS) allows OGSG a period of up to three years to recognize and/or measure certain assets and/or liabilities. The Government views the exercise of identifying and measuring legacy assets as very strategic. Hence OGSG has chosen to be diligent in its approach and consequently require more time to fully accomplish the exercise.

In its transition to accrual basis IPSASs, OGSG took advantage of this transitional exemption for its yet-to-be-valued and yet-to-be-recognized assets and liabilities. Coordinated efforts are currently being made to establish *fair value assessment* of all immovable assets controlled by the State. This is to be achieved, in part, through the constitution of a technical committee of relevant and experienced professionals from the Ministry of Works, other Infrastructure related MDAs and finance.

As a result of the foregoing, OGSG is unable to make an explicit and unreserved statement of compliance with accrual basis IPSASs in preparing its transitional IPSAS financial statements for this reporting period.

The State financial statements are presented in Nigerian Naira, which is the functional and reporting currency. The accounting policies have been consistently applied to all the years presented.

2.2 Summary of significant accounting policies

i) Basis of Accounting The State financial statements are prepared on an accrual basis.

Comolene ,

ii) Accounting Period

The accounting year (fiscal year) shall be from 1st January to 31st December in line with the National Treasury Circular Ref. OAGF/CAD/026/V.1/102 of 30th December, 2013. Each accounting year is divided into 1 calendar months (Period) and shall be set up as such in the accounting system.

iii) Consolidation

Controlled entities

The controlled entities are all those entities over which OGSG has the power to govern the financial and operating policies. These controlled entities are fully consolidated from the date in which control is attained by OGSG. They are de-consolidated from the date that control ceases.

Inter-entity transactions, balances and unrealized gains and losses on transactions between members of the State are eliminated in full. The accounting policies of the controlled entities are consistent with the policies adopted by OGSG.

iv) Interest in joint venture and associates

Where the State has an interest in a joint venture which is a Joint Arrangement, whereby the ventures have a binding arrangement that establishes joint control over the economic activities of the entity, the State recognizes its interest in the joint venture using the equity method of consolidation. Under the equity method, on initial recognition the investment in an associate or a joint venture is recognized at cost and the carrying amount is increased or decreased to recognize the investor's share of the surplus or deficit of the investee after the date of acquisition. The investor's share of the investee's surplus or deficit is recognized in the investor's surplus or deficit. Distributions received from an investee reduce the carrying amount of the investment. Adjustments to the carrying amount may also be necessary for changes in the investor's surplus or deficit. Such changes include those arising from the revaluation of property, plant and equipment and from foreign exchange translation differences. The investor's share of those changes is recognized in net assets/equity of the investor.

OGSG has neither associates nor joint ventures as at 31st December, 2022.

v) Current versus non-current classification

OGSG presents assets and liabilities in the statement of financial position based on current/non-current classification.

An asset is current when it is:

- Expected to be realized or intended to be sold or consumed in the normal operating cycle
- Held primarily for the purpose of trading
- Expected to be realized within twelve months after the reporting period, or

Omgoul ,

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

Cash or cash equivalent unless restricted from being exchanged or used to settle a liability for at least twelve months after the reporting period

All other assets are classified as non-current.

A liability is current when:

- It is expected to be settled in the normal operating cycle
- It is held primarily for the purpose of trading
- It is due to be settled within twelve months after the reporting period, or
- There is no unconditional right to defer the settlement of the liability for at least twelve months after the reporting period.

The State classifies all other liabilities as non-current.

vi) Comparative Information

The General-Purpose Financial Statements shall disclose all numerical information relating to previous period.

vii) Revenue recognition

Revenue from non-exchange transactions

Fees, taxes and fines

The State recognizes revenues from fees, taxes and fines when the event occurs and the asset recognition criteria are met. To the extent that there is a related condition attached that would give rise to a liability to repay the amount, deferred income is recognized instead of revenue. Other non-exchange revenues are recognized when it is probable that the future economic benefits or service potential associated with the asset will flow to the entity and the fair value of the asset can be measured reliably.

Transfers from other government entities

Revenues from non-exchange transactions with other government entities are measured at fair value and recognized on obtaining control of the asset (cash, goods, services and property) if the transfer is free from conditions and it is probable that the economic benefits or service potential related to the asset will flow to the State and can be measured reliably.

Aid and grants

- Aid and Grants to an Entity is recognized as income on entitlement, while aid and grants to other governments/agencies are recognized as expenditure on commitment.
- Grant should be recognized as either in kind (assets, goods or service) or cash

Compound;

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

• Assets related grant for which conditions are fully met should be recognized systematically as income in the GPFS to compensate the cost of the Asset (depreciation) it is intended to represent by applying deferred income method.

Subsidies, Donations and Endowments

Subsidies, Donations and Endowments to an Entity are recognized as income when money is received, or entitlement to receive money is established; except where fulfilment of any restrictions attached to these monies is not probable.

Revenue from exchange transactions

Rendering of services

The State recognizes revenue from rendering of services by reference to the stage of completion when the outcome of the transaction can be estimated reliably. The stage of completion is measured by reference to labor hours or cost incurred to date as a percentage of total estimated labor hours or total cost.

Where the contract outcome cannot be measured reliably, revenue is recognized only to the extent that the expenses incurred are recoverable.

Sale of goods

Revenue from the sale of goods is recognized when the significant risks and rewards of ownership have been transferred to the buyer, usually on delivery of the goods and when the amount of revenue can be measured reliably and it is probable that the economic benefits or service potential associated with the transaction will flow to the State.

Interest income

Interest income is accrued using the effective yield method. The effective yield discounts estimated future cash receipts through the expected life of the financial asset to that asset's net carrying amount. The method applies this yield to the principal outstanding to determine interest income each period.

Dividends

Dividends or similar distributions are recognized when the shareholder's or the State's right to receive payments is established.

Rental income

Rental income arising from operating leases on investment properties is accounted for on a straight-line basis over the lease terms and included in revenue.

Comolene,

viii) Expenses

All expenses should be reported on an accrual basis, i.e. all expenses are to be recognized in the period they are incurred or when the related services are enjoyed, irrespective of when the payment is made.

ix) Investment property

Investment properties are measured initially at cost, including transaction costs. The carrying amount includes the replacement cost of components of an existing investment property at the time the cost is incurred if the recognition criteria are met and excludes the costs of day-to-day maintenance of an investment property. Investment properties primary comprise irrigation assets and other rental yielding buildings.

Investment property acquired through a non-exchange transaction is measured at its fair value at the date of acquisition. Subsequent to initial recognition, investment properties are measured using the cost model and are depreciated over a 40-year period.

Investment properties are derecognized either when they have been disposed of or when the investment property is permanently withdrawn from use and no future economic benefit or service potential is expected from its disposal. The difference between the net disposal proceeds and the carrying amount of the asset is recognized in the surplus or deficit in the period of derecognition.

Rental income earned/ received from an investment property is presented is presented in surplus/ deficit as investment income

Transfers are made to or from investment property only when there is a change in use.

x) Property, plant and equipment

All property, plant and equipment are stated at cost less accumulated depreciation and impairment losses. Cost includes expenditure that is directly attributable to the acquisition of the items. When significant parts of property, plant and equipment are required to be replaced at intervals, the State recognizes such parts as individual assets with specific useful lives and depreciates them accordingly. Likewise, when a major overhaul is performed, its cost is recognized in the carrying amount of the plant and equipment as a replacement if the recognition criteria are satisfied. All other repair and maintenance costs are recognized in surplus or deficit as incurred. Where an asset is acquired in a non-exchange transaction for nil or nominal consideration the asset is initially measured at its fair value.

Capitalisation

- The capitalization threshold shall be #50,000 (Fifty Thousand Naira).
- Only amounts spent in connection with the above and whose values are equal or in excess of #50,000 (Fifty Thousand Naira) shall be capitalized.

comound,

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

- All assets equal to or above this amount shall be recorded in the PPE Register. However, in certain cases, it may be appropriate to aggregate individually insignificant value items such as
- Chairs and tables, printers and UPS etc. and apply the capitalization threshold to the aggregate value.
- An item of PPE whose costs are below the capitalization threshold shall be charged appropriately to the following accounts: office supplies- furniture, office supplies- IT equipment, office supplies- household equipment, etc.
- Where an asset's category already exists for a newly acquired asset below the capitalization threshold, such an asset shall be capitalized irrespective of its cost and recorded in the PPE register under the appropriate category.

Depreciation

Depreciation on assets is charged on a straight-line basis over the useful life of the asset.

The full depreciation charge shall be applied to PPE in the year they are available for use and no depreciation in the year of disposal.

Fully depreciated assets that are still in use are carried in the books at a carrying amount of #10.00

Depreciation is charged at rates calculated to allocate the cost or valuation of the asset less any estimated residual value over its remaining useful life:

Buildings	33.33 – 55 years
Infrastructure assets - others	20 – 22 years
Plant & Machi <mark>ner</mark> y	5-10 years
Furniture & Fitt <mark>ings</mark>	3 - 5 years
Fixed Asset-General (Motor Vehicles e.t.c)	3 - 5 years
Office & Other Equipment	3 – 4 years
Specialized Asset-General (Lab/Medical Equipment)	10 -15 years

An asset's carrying amount is written down immediately to its recoverable amount, or recoverable service amount, if the asset's carrying amount is greater than its estimated recoverable amount or recoverable service amount.

Revaluation

- The assets' residual values and useful lives are reviewed, and adjusted prospectively, if appropriate, at the end of each reporting period.
- Surplus arising from the revaluation shall be transferred to the revaluation reserve in the financial position under reserves.

Omgoul,

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

• In case of reservation deficit, it shall be set against the respective asset value and the corresponding entry to either the revaluation reserve, if surplus exists on the same class of asset, or to the statement of financial performance as an expense.

Disposal

The State derecognizes items of property, plant and equipment and/or any significant part of an asset upon disposal or when no future economic benefits or service potential is expected from its continuing use. Any gain or loss arising on derecognition of the asset (calculated as the difference between the net disposal proceeds and the carrying amount of the asset) is included in the surplus or deficit when the asset is derecognized.

xi) Leases

State as a lessee

Finance leases are leases that transfer substantially the entire risks and benefits incidental to ownership of the leased item to the State. Assets held under a finance lease are capitalized at the commencement of the lease at the fair value of the leased property or, if lower, at the present value of the future minimum lease payments. The State also recognizes the associated lease liability at the inception of the lease. The liability recognized is measured as the present value of the future minimum lease payments at initial recognition.

Subsequent to initial recognition, lease payments are apportioned between finance charges and reduction of the lease liability so as to achieve a constant rate of interest on the remaining balance of the liability. Finance charges are recognized as finance costs in surplus or deficit.

An asset held under a finance lease is depreciated over the useful life of the asset. However, if there is no reasonable certainty that the State will obtain ownership of the asset by the end of the lease term, the asset is depreciated over the shorter of the estimated useful life of the asset and the lease term.

Operating leases are leases that do not transfer substantially all the risks and benefits incidental to ownership of the leased item to the State. Operating lease payments are recognized as an operating expense in surplus or deficit on a straight-line basis over the lease term.

State as a lessor

Leases in which the State does not transfer substantially all the risks and benefits of ownership of an asset are classified as operating leases. Initial direct costs incurred in negotiating an operating lease are added to the carrying amount of the leased asset and recognized over the lease term.

Rent received from an operating lease is recognized as income on a straight-line basis over the lease term. Contingent rents are recognized as revenue in the period in which they are earned.

Comoline :

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

xii) Intangible assets

Intangible assets acquired separately are initially recognized at cost. The cost of intangible assets acquired in a non-exchange transaction is their fair value at the date of the exchange. Following initial recognition, intangible assets are carried at cost less any accumulated amortization and accumulated impairment losses. Internally generated intangible assets, excluding capitalized development costs, are not capitalized and expenditure is reflected in surplus or deficit in the period in which the expenditure is incurred.

The useful life of the intangible assets is assessed as either finite or indefinite.

Intangible assets with a finite life are amortized over its useful life:

Software 3-4 years

Intangible assets with a finite useful life are assessed for impairment whenever there is an indication that the asset may be impaired. Intangible assets with indefinite useful life are tested for impairment at least once year regardless of impairment indicators.

The amortization period and the amortization method, for an intangible asset with a finite useful life, are reviewed at the end of each reporting period. Changes in the expected useful life or the expected pattern of consumption of future economic benefits embodied in the asset are considered to modify the amortization period or method, as appropriate, and are treated as changes in accounting estimates. The amortization expense on an intangible asset with a finite life is recognized in surplus or deficit as the expense category that is consistent with the nature of the intangible asset.

Gains or losses arising from derecognition of an intangible asset are measured as the difference between the net disposal proceeds and the carrying amount of the asset and are recognized in the surplus or deficit when the asset is derecognized.

Research and development costs

The State expenses research costs as incurred. Development costs on an individual project are recognized as intangible assets when the State can demonstrate:

- The technical feasibility of completing the asset so that the asset will be available for use or sale
- Its intention to complete and its ability to use or sell the asset
- How the asset will generate future economic benefits or service potential
- The availability of resources to complete the asset
- The ability to measure reliably the expenditure during development

Omgoul:

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

Following initial recognition of an asset, the asset is carried at cost less any accumulated amortization and accumulated impairment losses. Amortization of the asset begins when development is complete and the asset is available for use. It is amortized over the period of expected future benefit. During the period of development, the asset is tested for impairment annually with any impairment losses recognized immediately in surplus or deficit.

xiii) Impairment of non-financial assets

Impairment of cash-generating assets

At each reporting date, the State assesses whether there is an indication that an asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, the State estimates the asset's recoverable amount. An asset's recoverable amount is the higher of an asset's or cash-generating unit's fair value less costs to sell and its value in use and is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets or group of assets.

Where the carrying amount of an asset or the cash-generating unit (CGU) exceeds its recoverable amount, the asset is considered impaired and is written down to its recoverable amount.

In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. In determining fair value less costs to sell, recent market transactions are taken into account, if available. If no such transactions can be identified, an appropriate valuation model is used.

Impairment losses of continuing operations are recognized in the statement of financial performance in those expense categories consistent with the nature of the impaired asset.

Impairment of non-cash-generating assets

The State assesses at each reporting date whether there is an indication that a non-cash-generating asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, the State estimates the asset's recoverable service amount. An asset's recoverable service amount is the higher of the non-cash-generating asset's fair value less costs to sell and its value in use.

Where the carrying amount of an asset exceeds its recoverable service amount, the asset is considered impaired and is written down to its recoverable service amount.

In assessing value in use, the State has adopted the depreciation replacement cost approach. Under this approach, the present value of the remaining service potential of an asset is determined as the depreciated replacement cost of the asset. The depreciated replacement cost is

compoul,

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

measured as the reproduction or replacement cost of the asset, whichever is lower, less accumulated depreciation calculated on the basis of such cost, to reflect the already consumed or expired service potential of the asset.

In determining fair value less costs to sell, the price of the assets in a binding agreement in an arm's length transaction, adjusted for incremental costs that would be directly attributed to the disposal of the asset is used. If there is no binding agreement, but the asset is traded on an active market, fair value less cost to sell is the asset's market price less cost of disposal. If there is no binding sale agreement or active market for an asset, the State determines fair value less cost to sell based on the best available information.

For each asset, an assessment is made at each reporting date as to whether there is any indication that previously recognized impairment losses may no longer exist or may have decreased. If such indication exists, the State estimates the asset's recoverable service amount. A previously recognized impairment loss is reversed only if there has been a change in the assumptions used to determine the asset's recoverable service amount since the last impairment loss was recognized. The reversal is limited so that the carrying amount of the asset does not exceed its recoverable service amount, nor exceed the carrying amount that would have been determined, net of depreciation, had no impairment loss been recognized for the asset in prior years. Such reversal is recognized in surplus or deficit.

xiv) Financial Instruments

Financial Assets

Initial recognition and measurement

Financial assets within the scope of IPSAS 29 Financial Instruments: Recognition and Measurement are classified as financial assets at fair value through surplus or deficit, loans and receivables, held-to-maturity investments or available-for-sale financial assets, as appropriate. The State determines the classification of its financial assets at initial recognition.

The State's financial assets include: cash and short-term deposits; trade and other receivables; loans and other receivables; quoted and unquoted financial instruments.

Subsequent measurement

The subsequent measurement of financial assets depends on their classification.

Financial assets at fair value through surplus or deficit

Financial assets at fair value through surplus or deficit include financial assets held for trading and financial assets designated upon initial recognition at fair value through surplus and deficit. Financial assets are classified as held for trading if they are acquired for the purpose of selling or repurchasing in the near term. Derivatives, including separated embedded derivatives are also classified as held for trading unless they are designated as effective hedging instruments. Financial assets at fair value through surplus or deficit are carried in the statement of financial position at fair value with changes in fair value recognized in surplus or deficit. OGSG does not have any 'financial assets at fair value through surplus or deficit' as at 31 December 2022.

Compound :

Loans and receivables

Loans and receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. After initial measurement, such financial assets are subsequently measured at amortized cost using the effective interest method, less impairment. Amortized cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the effective interest rate. Losses arising from impairment are recognized in the surplus or deficit.

Held-to-maturity

Non-derivative financial assets with fixed or determinable payments and fixed maturities are classified as held to maturity when the State has the positive intention and ability to hold it to maturity. After initial measurement, held-to-maturity investments are measured at amortized cost using the effective interest method, less impairment. Amortized cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the effective interest rate. The losses arising from impairment are recognized in surplus or deficit. OGSG does not have any 'held to maturity' as at 31 December 2022.

Available-for-sale financial assets

The State classifies available-for-sale financial assets as non-derivative financial assets that are designated as available for sale or are not classified as loans and receivables, held-to-maturity or financial assets at fair value through surplus or deficit.

After initial measurement, available-for-sale financial investments are subsequently measured at fair value with gains or losses recognized directly in net assets through the statement of changes in net assets until the financial asset is derecognized, at which time the cumulative gain or loss is recognized in surplus or deficit.

Derecognition

The State derecognizes a financial asset or, where applicable, a part of a financial asset or part of a group of similar financial assets when:

- The rights to receive cash flows from the asset have expired or is waived
- The State has transferred its rights to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party; and either: (a) the State has transferred substantially all the risks and rewards of the asset; or (b) the State has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

Omgoul ,

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

Impairment of financial assets

The State assesses at each reporting date whether there is objective evidence that a financial asset or a group of financial assets is impaired. A financial asset or a group of financial assets is deemed to be impaired if, and only if, there is objective evidence of impairment as a result of one or more events that has occurred after the initial recognition of the asset (an incurred 'loss event') and that loss event has an impact on the estimated future cash flows of the financial asset or the group of financial assets that can be reliably estimated. Evidence of impairment may include the following indicators:

- The debtors or a group of debtors are experiencing significant financial difficulty
- Default or delinquency in interest or principal payments
- The probability that debtors will enter bankruptcy or other financial reorganization
- Observable data indicates a measurable decrease in estimated future cash flows (e.g. changes in arrears or economic conditions that correlate with defaults)

Financial assets carried at amortized cost

For financial assets carried at amortized cost, the State first assesses whether objective evidence of impairment exists individually for financial assets that are individually significant, or collectively for financial assets that are not individually significant. If the State determines that no objective evidence of impairment exists for an individually assessed financial asset, whether significant or not, it includes the asset in a group of financial assets with similar credit risk characteristics and collectively assesses them for impairment. Assets that are individually assessed for impairment and for which an impairment loss is, or continues to be, recognized are not included in a collective assessment of impairment.

If there is objective evidence that an impairment loss has been incurred, the amount of the loss is measured as the difference between the assets carrying amount and the present value of estimated future cash flows (excluding future expected credit losses that have not yet been incurred). The present value of the estimated future cash flows is discounted at the financial asset's original effective interest rate. If a loan has a variable interest rate, the discount rate for measuring any impairment loss is the current effective interest rate.

The carrying amount of the asset is reduced through the use of an allowance account and the amount of the loss is recognized in surplus or deficit. Loans together with the associated allowance are written off when there is no realistic prospect of future recovery and all collateral has been realized or transferred to the State. If, in a subsequent year, the amount of the estimated impairment loss increases or decreases because of an event occurring after the impairment was recognized, the previously recognized impairment loss is increased or reduced by adjusting the allowance account. If a future write-off is later recovered, the recovery is credited to finance costs in surplus or deficit.

compound,

Available-for-sale financial assets

For available-for-sale financial assets, the State assesses at each reporting date whether there is objective evidence that an investment or a group of investments is impaired.

In the case of financial assets classified as available-for-sale, objective evidence would include a significant or prolonged decline in the fair value of the investment below its cost. 'Significant' is evaluated against the original cost of the investment and 'prolonged' against the period in which the fair value was below its original cost. Where there is evidence of impairment, the cumulative loss – measured as the difference between the acquisition cost and the current fair value, less any impairment loss on that investment previously recognized in the surplus or deficit – is removed from the reserve in net assets and recognized in surplus or deficit.

In the case of debt instruments classified as available-for-sale, impairment is assessed based on the same criteria as financial assets carried at amortized cost. However, the amount recorded for impairment is the cumulative loss measured as the difference between the amortized cost and the current fair value, less any impairment loss on that investment previously recognized in surplus or deficit.

Financial liabilities

Initial recognition and measurement

Financial liabilities within the scope of IPSAS 29 are classified as financial liabilities at fair value through surplus or deficit or loans and borrowings, as appropriate. The State determines the classification of its financial liabilities at initial recognition.

All financial liabilities are recognized initially at fair value and, in the case of loans and borrowings, plus directly attributable transaction costs.

The State's financial liabilities include trade and other payables, bank overdrafts, loans and borrowings, financial guarantee contracts.

Payables

Payables are recognized initially at fair value and subsequently measured at amortized cost using the effective interest method.

Accrued Expenses

- These are monies payable to third parties in respect of goods and services received.
- Accrued Expenses for which payment is due in the next 12 months shall be classified as Current Liabilities. Where the payments are due beyond the next 12 months, it shall be accounted for as Non-Current Liabilities.

compound;

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

Subsequent measurement

The measurement of financial liabilities depends on their classification.

Financial liabilities at fair value through surplus or deficit

Financial liabilities at fair value through surplus or deficit include financial liabilities held for trading and financial liabilities designated upon initial recognition as at fair value through surplus or deficit.

Financial liabilities are classified as held for trading if they are acquired for the purpose of selling in the near term. This category includes derivative financial instruments entered into by the State that are not designated as hedging instruments in hedge relationships as defined by IPSAS 29.

Gains or losses on liabilities held for trading are recognized in surplus or deficit.

Loans and borrowing

After initial recognition, interest bearing loans and borrowings are subsequently measured at amortized cost using the effective interest method. Gains and losses are recognized in surplus or deficit when the liabilities are derecognized as well as through the effective interest method amortization process.

Amortized cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the effective interest rate.

Borrowings falling due within 12 months are classified as current liabilities while borrowings falling due over more than 12 months are classified as long-term borrowings.

Borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset are capitalized and included in the cost of that asset.

A qualifying asset is an asset that necessarily takes a substantial period of time to get ready for its intended use or sale.

All other borrowing costs are recognized as an expense in the period in which they are incurred.

Derecognition

A financial liability is derecognized when the obligation under the liability is discharged or cancelled or expires.

Compound;

When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as a derecognition of the original liability and the recognition of a new liability, and the difference in the respective carrying amounts is recognized in surplus or deficit.

Offsetting of financial instruments

Financial assets and financial liabilities are offset and the net amount reported in the State statement of financial position if, and only if, there is a currently enforceable legal right to offset the recognized amounts and there is an intention to settle on a net basis, or to realize the assets and settle the liabilities simultaneously.

Fair value of financial instruments

The fair value of financial instruments that are traded in active markets at each reporting date is determined by reference to quoted market prices or dealer price quotations (bid price for long positions and ask price for short positions), without any deduction for transaction costs.

xv) Cash and cash equivalents

Cash and cash equivalents comprise cash on hand and cash at bank, deposits on call and highly liquid investments with an original maturity of three months or less, which are readily convertible to known amounts of cash and are subject to insignificant risk of changes in value.

For the purpose of the State statement of cash flows, cash and cash equivalents consist of cash and short-term deposits as defined above, net of outstanding bank overdrafts.

xvi) Deposits

- Deposits consist of resource held in custody on behalf of third parties.
- Deposits can also represent payments received in advance for goods/services to be offered later.
- Deposits, for which the services are to be offered within 12 months from the end of the reporting period, shall be classified as Current Liabilities. Where the services are expected to span beyond the next 12 month after the end of reporting period, it shall be accounted for as a Non-Current Deposits and classified as Non-Current Liabilities.

xvii) Accounts Receivable:

- a. Receivable from exchange transactions
- Receivables from exchange transactions are recognized initially at fair value and subsequently measured at amortized cost using the

Compound;

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

effective interest method, less provision for impairment.

- A provision for impairment of receivables is established when there is objective evidence that the Entity will not be able to collect all amounts due according to the original terms of the receivables.
- b. Receivables from non-exchange transactions
- Receivables from non-exchange transactions comprise; fees, taxes, and fines (and any penalties associated with these activities) as well as social benefit receivables that do not arise out of a contract.
- These receivables are initially assessed at nominal amount or face value; that is, the receivable reflect the amount of tax owed, levy, fine charged etc.
- These receivables are subsequently adjusted for penalties as they are charged or possible write down as a result of impairment.
- Interest and penalties charged on tax receivables are presented as tax revenue in the Statement of Financial Performance.

xviii) Prepayments

- Prepaid expenses are amounts paid in advance of receipts of goods or services.
- They can represent payments made early in the year for benefits to be received over the latter part of the year, or payments made in one year for benefits to be received in subsequent years.
- Prepayments for which the benefits are to be derived in the following 12 months should be classified as Current Assets. Where the benefits are expected to accrue beyond the next 1 months, it should be accounted for as a Long-Term Prepayment and classified as Non-Current Assets.
- Prepayments that are identifiable with specific future revenue or event, e.g. adverts, should be expensed in the period in which the related event takes place; those that relate to specific time periods, e.g. insurance, rent, leasehold premises, should be recognized as an expense in such periods.
- Prepayments not exceeding e.g. #10,000 shall be expensed immediately, except there is a possibility of obtaining a refund or credit within the same financial year. (However, threshold to be determined by the respective tier of government/Entities).

Compoul :

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

xix) Inventories

Inventory is measured at cost upon initial recognition. To the extent that inventory was received through non-exchange transactions (for no cost or for a nominal cost), the cost of the inventory is its fair value at the date of acquisition.

Costs incurred in bringing each product to its present location and conditions are accounted for, as follows:

- Raw materials: purchase cost
- Finished goods and work in progress: cost of direct materials and labor and a proportion of manufacturing overheads based on the normal operating capacity, but excluding borrowing costs

After initial recognition, inventory is measured at the lower of cost and net realizable value. Net realizable value is the estimated selling price in the ordinary course of operations, less the estimated costs of completion and the estimated costs necessary to make the sale, exchange, or distribution.

Inventories are recognized as an expense when deployed for utilization or consumption in the ordinary course of operations of the State.

xx) Provisions

Provisions are recognized when the State has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits or service potential will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation.

Where the State expects some or all of a provision to be reimbursed, for example, under an insurance contract, the reimbursement is recognized as a separate asset only when the reimbursement is virtually certain.

The expense relating to any provision is presented in the statement of financial performance net of any reimbursement. The provisions primarily arise from ongoing litigations and from long-term environmental obligations for which there is present obligations, outflow are probable and reliable estimates could be made.

Restoration / Decommissioning liability

Decommissioning costs are provided at the present value of expected costs to settle the obligation using estimated cash flows and are recognized as part of the cost of that particular asset. The cash flows are discounted at a current pre-tax rate that reflects the risks specific to the restoration/decommissioning liability. The unwinding of the discount is expensed as incurred and recognized in the statement of financial

Omgoul ,

performance as a finance cost. The estimated future costs of decommissioning are reviewed annually and adjusted as appropriate. Changes in the estimated future costs or in the discount rate applied are added to or deducted from the cost of the asset.

Contingent liabilities

The State does not recognize a contingent liability, but discloses details of any contingencies in the notes to the financial statements, unless the possibility of an outflow of resources embodying economic benefits or service potential is remote.

Contingent assets

The State does not recognize a contingent asset, but discloses details of a probable asset whose existence is contingent on the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the State in the notes to the financial statements. Contingent assets are assessed continually to ensure that developments are appropriately reflected in the financial statements. If it has become virtually certain that an inflow of economic benefits or service potential will arise and the asset's value can be measured reliably, the asset and the related revenue are recognized in the financial statements of the period in which the change occurs.

xxi) Changes in accounting policies and estimates

The State recognizes the effects of changes in accounting policy retrospectively. The effects of changes in accounting policy are applied prospectively if retrospective application is impractical.

The State recognizes the effects of changes in accounting estimates prospectively by including in surplus or deficit.

xxii) Employee benefits

Retirement benefit plans

The State provides retirement benefits for its employees and political officer holders.

Defined contribution plans are post-employment benefit plans under which an entity pays fixed contributions into a separate entity (a fund), and will have no legal or constructive obligation to pay further contributions if the fund does not hold sufficient assets to pay all employee benefits relating to employee service in the current and prior periods. The contributions to fund obligations for the payment of retirement benefits are charged against income in the year in which they become payable.

Defined benefit plans are post-employment benefit plans other than defined-contribution plans. The defined-benefit funds are actuarially valued based on the projected unit credit method basis. Deficits identified are recovered through lump sum payments or increased future contributions on proportional basis. The contributions and lump sum payments reduce the post-employment benefit obligation.

Compoul ,

Short and long-term employee benefits

The cost of all short-term employee benefits, such as leave pay, is recognized during the period in which the employee renders the related service. The State recognizes the expected cost of performance bonuses only when the State has a present legal or constructive obligation to make such payment, and a reliable estimate can be made.

The State provides long-term incentives to eligible employees, payable on completion of years of employment. The State's liability is based on an actuarial valuation. The projected unit credit method has been used to value the obligation. Actuarial gains and losses on the long-term incentives are fully accounted for in the statement of financial performance.

xxiii) Unremitted Deductions

- Unremitted Deductions are monies owed to third parties such as tax Authorities, Unions, Cooperatives, Schemes and Associations, other government agencies, etc. These include: tax deductions and other deductions at source.
- These amounts shall be stated in the GPFS at their repayment value, which shall be treated as Current Liabilities in the Statement of Financial Position

xxiv) Foreign currency transactions

Transactions in foreign currencies are initially accounted for at the ruling rate of exchange on the date of the transaction. Payables and receivables denominated in foreign currency are reported at the statement of financial position reporting date by applying the exchange rate on that date. Exchange differences arising from the settlement of creditors, or from the reporting of creditors at rates different from those at which they were initially recorded during the period, are recognized as income or expenses in the period in which they arise.

xxv) Borrowing costs

Borrowing costs are incurred when acquiring qualifying assets as part of property, plant and equipment. Such borrowing costs are expenses in the year it occurred.

xxvi) Related parties

The State regards a related party as a person or an entity with the ability to exert control individually or jointly, or to exercise significant influence over the State, or vice versa. Members of key management are regarded as related parties and comprise the State Executive Committee Members and Heads of Ministries, Departments and Agencies.

Compoul ;

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

xxvii) Service concession arrangements

The State analyses all aspects of service concession arrangements that it enters into in determining the appropriate accounting treatment and disclosure requirements. In particular, where a private party contributes an asset to the arrangement, the State recognizes that asset when, and only when, it controls or regulates the services the operator must provide together with the asset, to whom it must provide them, and at what price. In the case of assets other than 'whole-of-life' assets, it controls, through ownership, beneficial entitlement or otherwise – any significant residual interest in the asset at the end of the arrangement. Any assets so recognized are measured at their fair value. To the extent that an asset has been recognized, the State also recognizes a corresponding liability, adjusted by a cash consideration paid or received.

xxviii) Budget information

The State currently prepare cash basis budget and all planned costs and income are presented in a single statement to determine the needs of the State. When the State will transit to accrual basis for budgeting purposes, there would be no basis, timing or entity differences that would require reconciliation between the actual comparable amounts and the amounts presented as a separate additional financial statement in the statement of comparison of budget and actual amounts.

xxix) Significant judgments and sources of estimation uncertainty

The preparation of the State's financial statements in conformity with IPSAS requires management to make judgments, estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities, and the disclosure of contingent liabilities, at the end of the reporting period. However, uncertainty about these assumptions and estimates could result in outcomes that require a material adjustment to the carrying amount of the asset or liability affected in future periods.

Judgments

In the process of applying the State's accounting policies, management has made judgments, which have the most significant effect on the amounts recognized in the State financial statements.

Estimates and assumptions

In accordance with IPSAS 1 P. 140, the key assumptions concerning the future and other key sources of estimating uncertainty at the reporting date that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year, are described below. The State based its assumptions and estimates on parameters available when the State financial statements were prepared. However, existing circumstances and assumptions about future developments may change due to market changes or circumstances arising beyond the control of the State. Such changes are reflected in the assumptions when they occur.

Comocoul,

Useful lives and residual values

The useful lives and residual values of assets are assessed using the following indicators to inform potential future use and value from disposal:

- The condition of the asset based on the assessment of experts employed by the State
- The nature of the asset, its susceptibility and adaptability to changes in technology and processes
- The nature of the processes in which the asset is deployed
- Availability of funding to replace the asset
- Changes in the market in relation to the asset

Impairment of non-financial assets – cash-generating assets

The recoverable amounts of cash-generating units and individual assets have been determined based on the higher of value-in-use calculations and fair values less costs to sell. These calculations require the use of estimates and assumptions. It is reasonably possible that the assumptions may change, which may then impact management's estimations and require a material adjustment to the carrying value of tangible assets.

The State reviews and tests the carrying value of assets when events or changes in circumstances suggest that the carrying amount may not be recoverable. Cash-generating assets are stated at the lowest level for which identifiable cash flows are largely independent of cash flows of other assets and liabilities. If there are indications that impairment may have occurred, estimates of expected future cash flows are prepared for each group of assets. Expected future cash flows used to determine the value in use of tangible assets are inherently uncertain and could materially change over time.

Impairment of non-financial assets – cash generating assets

The State reviews and tests the carrying value of non-cash-generating assets when events or changes in circumstances suggest that there may be a reduction in the future service potential that can reasonably be expected to be derived from the asset. Where indicators of possible impairment are present, the State undertakes impairment tests, which require the determination of the fair value of the asset and its recoverable service amount. The estimation of these inputs into the calculation relies on the use estimates and assumptions. Any subsequent changes to the factors supporting these estimates and assumptions may have an impact on the reported carrying amount of the related asset.

Fair value estimation – financial instruments

Where the fair value of financial assets and financial liabilities recorded in the statement of financial position cannot be derived from active markets, their fair value is determined using valuation techniques including the discounted cash flow model. The inputs to these models are taken from observable markets where possible, but where this is not feasible, judgment is required in establishing fair values. Judgment includes the consideration of inputs such as liquidity risk, credit risk and volatility. Changes in assumptions about these factors could affect the reported fair value of financial instruments.

Compound;

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

Provisions

Provisions were raised and management determined an estimate based on the information available.

Provisions are measured at the management's best estimate of the expenditure required to settle the obligation at the reporting date, and are discounted to present value where the effect is material.

Provision is made for the estimated cost to be incurred on the long-term environmental obligations, comprising expenditure on pollution control and closure over the estimated life of the landfill. The provision is based on the advice and judgment of qualified engineers.

The increase in the restoration provision due to passage of time is recognized as finance cost in the statement of financial performance.

The cost of ongoing programs to prevent and control pollution and rehabilitate the environment is recognized as an expense when incurred.

Held-to-maturity investments and loans and receivables

The State assesses its loans and receivables and its held-to-maturity investments at the end of each reporting period. In determining whether an impairment loss should be recorded in surplus or deficit, the State evaluates the indicators present in the market to determine if those indicators are indicative of impairment in its loans and receivables or held-to-maturity investments.

Where specific impairments have not been identified the impairment for receivables, held-to-maturity investments and loans and receivables is calculated on a portfolio basis, based on historical loss ratios, adjusted for national and industry-specific economic conditions and other indicators present at the reporting date that correlate with defaults on the portfolio. These annual loss ratios are applied to loan balances in the portfolio and scaled to the estimated loss emergence period.

xxx) Public Funds

- These are balances of Government funds at the end of the financial year.
- They are classified under the Non-Current Liabilities in the Statement of Financial Position and include: Trust Funds, Revolving Funds and other Funds Created by Government.

xxxi) Reserves

Reserves are classified under equity in the Statement of Financial Position and include: Surpluses/ (Deficit) Reserve, Translation Reserve,

Revaluation Reserve, Fair Value Reserve and other Reserves.

Omgoul:

Tunde Aregbesola Accountant-General/Permanent Secretary 28 April, 2023

xxxii) Contingency Liability

- A contingency liability is a possible obligation arising from past events whose existence will be confirmed only by uncertain future event(s) or present obligation arising from past events that are not recognized because either an outflow of economic benefit is not probable or the amount of the obligation cannot be reliably measured.
- Contingent Liabilities shall only be disclosed in the Notes to the GPFS.

xxxiii) Contingency Assets

- Contingent assets are possible future assets arising from past events whose existence will be confirmed on the occurrence or nonoccurrence of one or more uncertain future events not wholly within the control of the entity.
- Contingency assets shall only be disclosed in the Notes to the GPFS.

xxxiv) Transfers to Other Government Entities

Transfers to other government entities are non-exchange items and are recognized as expenses in the statement of financial performance.

Depreciation expense is systematic allocation of depreciable amount of an item of property, plant and equipment over its useful life. Depreciation begins

when the property, plant and equipment is available for use. The useful life of each assest is ressessed at the end of every reporting period and

where expectation differs from previous projectiosa, the change is accounted for as a change in accounting estimates and treated prospectively.

Depreciation is charged in the year of construction of acquisition and none is charged in the year of disposal or asset retirement.

NOTE 18			
REIMBURSABLES FROM FEDERAL GOVERNMENT			
DETAILS	REF. NOTE	31st December 2022	31st December 2021

Compound,

Due to exchange rate differences, an end of the year reconciliation of Ogun State Government external debt stock with the Debt Management Office (DMO) was conducted. The reconciliation exercise resulted in an increase of #3.7billion in the carrying amount of the external debt stock as at 31st December,2022 This difference has been accommodated and adjusted for in the Year 2022 Statement of Changes in Net Assets and Equity. The schedule below shows the DMO reconciled Foreign loan stock as at 31st December, 2022 and new drawdown received from Development Partners but not yet adopted by DMO.
